

## Questaweb Obtains Microsoft .NET Certification for TradeMasterQW

*The QuestaWeb Import and Export Compliance Solution is certified as a .NET connected application. QuestaWeb's global trade and logistics software, TradeMasterQW, now enables enterprise organizations leveraging .NET to quickly and cost-effectively integrate cross-border compliance and homeland security information.*

Westfield, NJ (PRWEB) January 2, 2004 -- QuestaWeb Inc., a provider of web-native trade management solutions, today announced that the QuestaWeb Import and Export Compliance Solution is certified as a .NET connected application. QuestaWeb's global trade and logistics software, TradeMasterQW, now enables enterprise organizations leveraging .NET to quickly and cost-effectively integrate cross-border compliance and homeland security information.

TradeMasterQW functionality is delivered over the Internet/Extranet ensuring uniformity, real-time visibility, rapid diagnostics, and increased productivity throughout the supply chain. Until recently, executives and IT departments believed this level of visibility would be too costly and require cumbersome integration. Combining the power of Windows and .NET Web services with Questaweb Solution makes this visibility a reality.

By building upon the Microsoft Platform and .Net, Questaweb enables businesses to flexibly integrate information that can provide them with significant competitive advantage while continuing to leverage their infrastructure to the greatest possible extent. .NET Web services provide the technology for data collection capabilities from the points of origin and global data distribution to designated destinations, all without adding costly infrastructure. As soon as information becomes available, it is shared between importers, exporters, carriers, freight forwarders, customs house brokers, agents, and other collaborative partners.

The .NET-connected version of TradeMasterQW offers enhancements made possible by fully utilizing the Web services system libraries of the Microsoft .NET Framework. The benefits of this newly available product include greater flexibility for executives, greater security facilities and smooth upgrades. The .NET Framework is an integral Windows component that enables building and running the next generation of software applications and Web services.

"Microsoft is the standard in which to build Web services based applications" said Leon Turetsky, CEO of QuestaWeb, Inc. "We are delighted to join with Microsoft in developing and deploying next generation of cross-border trade solutions targeted to supply chain participants, who otherwise do not have easy access to this level of business information in real-time."

About QuestaWeb, Inc.

QuestaWeb is the provider of a full cycle multi-national cross-border solutions to pro-actively manage and monitor global trade, logistics, and clearance operations. QuestaWeb's TradeMasterQW is a modular web-native suite of integrated software applications with multi-lingual capabilities and up-to-date import/export compliance content. TradeMasterQW promotes collaboration among all stakeholders, accelerates the flow of goods through the global supply chain, reduces operational costs, and ensures compliance with cross-border regulations.
